Notes, cautions, and warnings

(i) NOTE: A NOTE indicates important information that helps you make better use of your product.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

MARNING: A WARNING indicates a potential for property damage, personal injury, or death.

Working inside your computer

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that you have read the safety information that shipped with your computer.

- WARNING: Before working inside your computer, read the safety information that is shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/ regulatory_compliance.
- WARNING: Disconnect your computer from all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting your computer to an electrical outlet.

CAUTION: To avoid damaging the computer, ensure that the work surface is flat, dry, and clean.

- CAUTION: To avoid damaging the components and cards, handle them by their edges, and avoid touching the pins and the contacts.
- CAUTION: You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that is shipped with the product or at www.dell.com/regulatory_compliance.
- CAUTION: Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity which could harm internal components.
- CAUTION: When you disconnect a cable, pull it by its connector or its pull tab, not the cable itself. Some cables have connectors with locking tabs or thumbscrews that you must disengage before disconnecting the cable. When disconnecting cables, keep them evenly aligned to avoid bending the connector pins. When connecting cables, ensure that the ports and the connectors are correctly oriented and aligned.

CAUTION: Press and eject any installed card from the media-card reader.

(i) NOTE: The color of your computer and certain components may appear differently than shown in this document.

Before working inside your computer

About this task

(i) NOTE: The images in this document may differ from your computer depending on the configuration you ordered.

Steps

- 1. Save and close all open files and exit all open applications.
- 2. Shut down your computer. Click Start > **U** Power > Shut down.

NOTE: If you are using a different operating system, see the documentation of your operating system for shut-down instructions.

- 3. Disconnect your computer and all attached devices from their electrical outlets.
- 4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.

CAUTION: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

5. Remove any media card and optical disc from your computer, if applicable.

Safety precautions

The safety precautions chapter details the primary steps to be taken before performing any disassembly instructions.

Observe the following safety precautions before you perform any installation or break/fix procedures involving disassembly or reassembly:

- Turn off the system and all attached peripherals.
- Disconnect the system and all attached peripherals from AC power.
- Disconnect all network cables, telephone, and telecommunications lines from the system.
- Use an ESD field service kit when working inside any tabletnotebookdesktop to avoid electrostatic discharge (ESD) damage.
- After removing any system component, carefully place the removed component on an anti-static mat.
- Wear shoes with non-conductive rubber soles to reduce the chance of getting electrocuted.

Standby power

Dell products with standby power must be unplugged before you open the case. Systems that incorporate standby power are essentially powered while turned off. The internal power enables the system to be remotely turned on (wake on LAN) and suspended into a sleep mode and has other advanced power management features.

Unplugging, pressing and holding the power button for 15 seconds should discharge residual power in the system board. Remove the battery from tablets.notebooks.

Bonding

Bonding is a method for connecting two or more grounding conductors to the same electrical potential. This is done through the use of a field service electrostatic discharge (ESD) kit. When connecting a bonding wire, ensure that it is connected to bare metal and never to a painted or non-metal surface. The wrist strap should be secure and in full contact with your skin, and ensure that you remove all jewelry such as watches, bracelets, or rings prior to bonding yourself and the equipment.

Electrostatic discharge—ESD protection

ESD is a major concern when you handle electronic components, especially sensitive components such as expansion cards, processors, memory DIMMs, and system boards. Very slight charges can damage circuits in ways that may not be obvious, such as intermittent problems or a shortened product life span. As the industry pushes for lower power requirements and increased density, ESD protection is an increasing concern.

Due to the increased density of semiconductors used in recent Dell products, the sensitivity to static damage is now higher than in previous Dell products. For this reason, some previously approved methods of handling parts are no longer applicable.

Two recognized types of ESD damage are catastrophic and intermittent failures.

- **Catastrophic** Catastrophic failures represent approximately 20 percent of ESD-related failures. The damage causes an immediate and complete loss of device functionality. An example of catastrophic failure is a memory DIMM that has received a static shock and immediately generates a "No POST/No Video" symptom with a beep code emitted for missing or nonfunctional memory.
- Intermittent Intermittent failures represent approximately 80 percent of ESD-related failures. The high rate of
 intermittent failures means that most of the time when damage occurs, it is not immediately recognizable. The DIMM
 receives a static shock, but the tracing is merely weakened and does not immediately produce outward symptoms related to
 the damage. The weakened trace may take weeks or months to melt, and in the meantime may cause degradation of memory
 integrity, intermittent memory errors, etc.

The more difficult type of damage to recognize and troubleshoot is the intermittent (also called latent or "walking wounded") failure.

Perform the following steps to prevent ESD damage:

- Use a wired ESD wrist strap that is properly grounded. The use of wireless anti-static straps is no longer allowed; they do not provide adequate protection. Touching the chassis before handling parts does not ensure adequate ESD protection on parts with increased sensitivity to ESD damage.
- Handle all static-sensitive components in a static-safe area. If possible, use anti-static floor pads and workbench pads.
- When unpacking a static-sensitive component from its shipping carton, do not remove the component from the anti-static
 packing material until you are ready to install the component. Before unwrapping the anti-static packaging, ensure that you
 discharge static electricity from your body.
- Before transporting a static-sensitive component, place it in an anti-static container or packaging.

ESD field service kit

The unmonitored Field Service kit is the most commonly used service kit. Each Field Service kit includes three main components: anti-static mat, wrist strap, and bonding wire.

Components of an ESD field service kit

The components of an ESD field service kit are:

- Anti-Static Mat The anti-static mat is dissipative and parts can be placed on it during service procedures. When using an anti-static mat, your wrist strap should be snug and the bonding wire should be connected to the mat and to any bare metal on the system being worked on. Once deployed properly, service parts can be removed from the ESD bag and placed directly on the mat. ESD-sensitive items are safe in your hand, on the ESD mat, in the system, or inside a bag.
- Wrist Strap and Bonding Wire The wrist strap and bonding wire can be either directly connected between your wrist and bare metal on the hardware if the ESD mat is not required, or connected to the anti-static mat to protect hardware that is temporarily placed on the mat. The physical connection of the wrist strap and bonding wire between your skin, the ESD mat, and the hardware is known as bonding. Use only Field Service kits with a wrist strap, mat, and bonding wire. Never use wireless wrist straps. Always be aware that the internal wires of a wrist strap are prone to damage from normal wear and tear, and must be checked regularly with a wrist strap tester in order to avoid accidental ESD hardware damage. It is recommended to test the wrist strap and bonding wire at least once per week.
- ESD Wrist Strap Tester The wires inside of an ESD strap are prone to damage over time. When using an unmonitored kit, it is a best practice to regularly test the strap prior to each service call, and at a minimum, test once per week. A wrist strap tester is the best method for doing this test. If you do not have your own wrist strap tester, check with your regional office to find out if they have one. To perform the test, plug the wrist-strap's bonding-wire into the tester while it is strapped to your wrist and push the button to test. A green LED is lit if the test is successful; a red LED is lit and an alarm sounds if the test fails.
- Insulator Elements It is critical to keep ESD sensitive devices, such as plastic heat sink casings, away from internal parts that are insulators and often highly charged.
- Working Environment Before deploying the ESD Field Service kit, assess the situation at the customer location. For example, deploying the kit for a server environment is different than for a desktop or portable environment. Servers are typically installed in a rack within a data center; desktops or portables are typically placed on office desks or cubicles. Always look for a large open flat work area that is free of clutter and large enough to deploy the ESD kit with additional space to accommodate the type of system that is being repaired. The workspace should also be free of insulators that can cause an ESD event. On the work area, insulators such as Styrofoam and other plastics should always be moved at least 12 inches or 30 centimeters away from sensitive parts before physically handling any hardware components
- ESD Packaging All ESD-sensitive devices must be shipped and received in static-safe packaging. Metal, static-shielded bags are preferred. However, you should always return the damaged part using the same ESD bag and packaging that the new part arrived in. The ESD bag should be folded over and taped shut and all the same foam packing material should be used in the original box that the new part arrived in. ESD-sensitive devices should be removed from packaging only at an ESD-protected work surface, and parts should never be placed on top of the ESD bag because only the inside of the bag is shielded. Always place parts in your hand, on the ESD mat, in the system, or inside an anti-static bag.
- **Transporting Sensitive Components** When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

ESD protection summary

It is recommended that all field service technicians use the traditional wired ESD grounding wrist strap and protective anti-static mat at all times when servicing Dell products. In addition, it is critical that technicians keep sensitive parts separate from all insulator parts while performing service and that they use anti-static bags for transporting sensitive components.

After working inside your computer

About this task

CAUTION: Leaving stray or loose screws inside your computer may severely damage your computer.

Steps

- 1. Replace all screws and ensure that no stray screws remain inside your computer.
- 2. Connect any external devices, peripherals, or cables you removed before working on your computer.
- 3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
- 4. Connect your computer and all attached devices to their electrical outlets.
- 5. Turn on your computer.

Disassembly and reassembly

Recommended tools

The procedures in this document may require the following tools:

- Phillips #0 screwdriver
- Phillips #1 screwdriver
- Philips #2 screwdriver
- Plastic scribe-Recommended for field technician
- T-30 torx screwdriver

Screw List

The following table shows the screw list and the images for different components.

- **NOTE:** When removing screws from a component, it is recommended to note the screw type, the quantity of screws, and then place them in a screw storage box. This is to ensure that the correct number of screws and correct screw type is restored when the component is replaced.
- **NOTE:** Some computers have magnetic surfaces. Ensure that the screws are not left attached to such surface when replacing a component.
- (i) NOTE: Screw color may vary with the configuration ordered.

Side cover

Removing the side cover

Prerequisites

- 1. Follow the procedure in before working inside your computer.
 - (i) NOTE: Ensure that you remove the security cable from the security-cable slot (if applicable).

About this task

The following images indicate the location of the side cover and provide a visual representation of the removal procedure.

- 1. Remove the single screw (M6.32x12.7) to unlock the release latch.
- 2. Pull the release latch to release the side cover from the computer.
- **3.** Open the side cover towards the side of the computer and lift the cover away from the computer.

Installing the side cover

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the side cover and provides a visual representation of the installation procedure.

1. Locate the side cover slot on your computer.

- 2. Align the tabs on the side cover with the slots on the chassis.
- **3.** Press the side cover gently.
- 4. The release latch automatically locks the side cover to the computer.
- 5. Replace the screw (M6.32x12.7) to secure the release latch.

Next steps

1. Follow the procedure in after working inside your computer.

Power-supply unit cage

Opening the power-supply unit cage

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.

About this task

The following images indicate the location of the power-supply unit cage and provide a visual representation of the removal procedure.

- 1. Lay the computer on the right side.
- 2. Slide the PSU hinge and the PSU release latch to unlock the PSU cage.
- **3.** Lift and open the PSU cage.

Closing the power-supply unit cage

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following images indicate the location of the power-supply unit cage and provide a visual representation of the installation procedure.

- 1. Rotate the PSU cage
- 2. Press the PSU cage down and slide the PSU hinge and PSU release latches to lock the PSU cage..

Next steps

- 1. Install the side cover.
- 2. Follow the procedure in after working inside your computer.

Front bezel

Removing the front bezel

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.

About this task

The following images indicate the location of the front bezel and provide a visual representation of the removal procedure.

- 1. Pry the retention tabs to release the front bezel from the computer.
- 2. Slightly pull the front bezel and gently rotate to release the other tabs on the bezel from the slots in the computer chassis.
- **3.** Remove the front bezel from the computer.

Installing the front bezel

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the front bezel and provides a visual representation of the installation procedure.

- 1. Position the front bezel to align the tabs on the bezel with the slots on the chassis.
- 2. Press the bezel until the tabs clicks into place.

Next steps

- 1. Install the side cover.
- 2. Follow the procedure in after working inside your computer.

Memory modules

Removing the memory modules

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- **3.** Open the PSU cage.

About this task

The following images indicate the location of the memory modules and provide a visual representation of the removal procedure.

- 1. Pull the securing clips from both side of the memory module until the memory module pops up.
- 2. Slide and remove the memory module from the memory-module slot.

Installing the memory modules

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the memory modules and provides a visual representation of the installation procedure.

- 1. Align the notch on the memory module with the tab on the memory-module slot.
- 2. Slide the memory module firmly into the slot at an angle and press the memory module down until it clicks into place.

(i) NOTE: If you do not hear the click, remove the memory module and reinstall it.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- 3. Follow the procedure in after working inside your computer.

Solid-state drive

Removing the M.2 2280 PCIe solid-state drive

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- **2.** Remove the side cover.
- 3. Open the PSU cage.

About this task

The following images indicate the location of the solid-state drive and provide a visual representation of the removal procedure.

- 1. Remove the screw (M2x3.5) that secures the solid-state drive to the system board.
- 2. Slide and lift the solid-state drive off the system board.

Installing the M.2 2280 PCIe solid-state drive

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the solid-state drive and provides a visual representation of the installation procedure.

- 1. Align the notch on the solid-state drive with the tab on the solid-state drive connector.
- 2. Insert the solid-state drive at a 45-degree angle into the slot on the system board.
- **3.** Replace the screw (M2x3.5) to secure the M.2 2280 solid-state drive to the system board.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- **3.** Follow the procedure in after working inside your computer.

2.5-inch hard drive

Removing the 2.5-inch hard-disk drive

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- 3. Open the PSU cage.

About this task

The following images indicate the location of the 2.5-inch hard-disk drive assembly and provide a visual representation of the removal procedure.

- 1. Disconnect the hard drive data and power cables from the connectors on the 2.5-inch hard-disk drive module.
- 2. Press the release tabs on both the sides of the hard-disk drive bracket to release it from the slots on the computer chassis.
- 3. Lift the hard-disk drive assembly from the computer.

(i) NOTE: Note the orientation of the hard-disk drive so that you can replace it correctly.

Installing the 2.5-inch hard-disk drive

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the 2.5-inch hard-disk drive assembly and provides a visual representation of the installation procedure.

- 1. Press the release tabs on the hard-disk drive bracket and slightly align back to insert the hard-disk drive assembly to the slot on the computer chassis.
- 2. Connect the hard drive data and power cables to the connectors on the 2.5-inch hard-disk drive module.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- **3.** Follow the procedure in after working inside your computer.

3.5-inch hard drive

Removing the 3.5-inch hard-disk drive assembly

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- **3.** Open the PSU cage.

About this task

The following images indicate the location of the 3.5-inch hard-disk drive assembly and provide a visual representation of the removal procedure.

- 1. Lift the side of the PCIe holder that sits on the graphics card.
- 2. Slide the PCIe holder to release the tab from the slot on the chassis
- 3. Disconnect the hard drive data and power cables from the connectors on the 3.5-inch hard-disk drive module.
- 4. Press the release tabs on both the sides of the hard-disk drive bracket to release it from the slots on the computer chassis.
- 5. Lift the hard-disk drive assembly from the computer.

(i) NOTE: Note the orientation of the hard-disk drive so that you can replace it correctly.

Installing the 3.5-inch hard-disk drive assembly

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the 3.5-inch hard-disk drive assembly and provides a visual representation of the installation procedure.

- 1. Press the release tabs on the hard-disk drive bracket and align to insert the hard-disk drive assembly to the slot on the computer chassis.
- 2. Connect the hard drive data and power cables to the connectors on the 3.5-inch hard-disk drive module.
- **3.** Insert the tab on the PCIe card holder into the slot on the chassis and gently press down until it is secured to the graphics card.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- **3.** Follow the procedure in after working inside your computer.

WLAN card

Removing the WLAN card

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- **2.** Remove the side cover.
- 3. Open the PSU cage.

About this task

The following images indicate the location of the wireless card and provide a visual representation of the removal procedure.

Steps

- 1. Remove the (M2x3.5) screw that secures the WLAN card to the system board.
- $\ensuremath{\mathbf{2}}.$ Lift the WLAN card bracket away from the WLAN card.
- **3.** Disconnect the antenna cables from the WLAN card.
- **4.** Slide and remove the WLAN card from the connector on the system board.

Installing the WLAN card

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the wireless card and provides a visual representation of the installation procedure.

 Connect the antenna cables to the WLAN card. The following table provides the antenna-cable color scheme for the WLAN card of your computer.

Table 2. Antenna-cable color scheme

Connectors on the wireless card	Antenna-cable color
Main (white triangle)	White
Auxiliary (black triangle)	Black

- 2. Place the WLAN card bracket to secure the WLAN antenna cables.
- 3. Insert the WLAN card into the connector on the system board.
- 4. Replace the (M2x3.5) screw to secure the plastic tab to the WLAN card.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- 3. Follow the procedure in after working inside your computer.

Slim optical-drive

Removing the Slim-Optical Disk Drive

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- 3. Open the PSU cage.

About this task

The following images indicate the location of the slim ODD and provide a visual representation of the removal procedure.

Steps

- 1. Disconnect the data and power cables from the slim ODD.
- 2. Pull the securing tab to release the slim ODD from the chassis.
- **3.** Slide and remove the slim ODD from the ODD slot.

Installing the Slim-Optical Disk Drive

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following images indicate the location of the slim ODD and provide a visual representation of the installation procedure.

Steps

- 1. Insert the slim ODD assembly into the ODD slot.
- **2.** Slide the slim ODD assembly until it snaps into place.
- 3. Route the power cable and data cable through the routing guides and connect the cables to the slim ODD.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- **3.** Follow the procedure in after working inside your computer.

Graphics card

Removing the graphics card

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- **3.** Open the PSU cage.

About this task

The following images indicate the location of the graphics card and provide a visual representation of the removal procedure.

Steps

- 1. Locate the graphics card (PCI-Express).
- 2. Lift the side of the PCIe holder that sits on the graphics card.
- 3. Slide the PCIe holder to release it from the slot on the chassis
- 4. Push and hold the securing tab on the graphics-card slot and lift the graphics card from the graphics-card slot.

Installing the graphics card

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following images indicate the location of the graphics card and provide a visual representation of the installation procedure.

- 1. Align the graphics card with the PCI-Express card connector on the system board.
- 2. Using the alignment post, connect the graphics card in the connector and press down firmly. Ensure that the card is firmly seated.
- **3.** Insert the tab on the PCIe card holder into the slot on the chassis and gently press down until it is secured to the graphics card.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- **3.** Follow the procedure in after working inside your computer.

System fan

Removing the system fan

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- 3. Open the PSU cage.

About this task

The following images indicate the location of the fan duct and provide a visual representation of the removal procedure.

- 1. Disconnect the system fan cable from the connector on the system board.
- 2. Remove the single (#6-32) screw that secures the system fan bracket to the computer chassis.
- 3. Slide the system fan and bracket out of the computer.

Installing the system fan

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the fan duct and provides a visual representation of the installation procedure.

- 1. Position the system fan to align it with the slots on the computer chassis.
- 2. Replace the single (#6-32) screw that secures the system fan to the computer chassis.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- 3. Follow the procedure in after working inside your computer.

Coin-cell battery

Removing the coin-cell battery

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- 3. Open the PSU cage.
- 4. Remove the powered GPU.
 - **(i) NOTE:** This step is required only if the system is configured with powered GPU.

About this task

The following images indicate the location of the coin-cell battery and provide a visual representation of the removal procedure.

- 1. Using a plastic scribe, gently pry the coin-cell battery out of the slot on the system board.
- 2. Remove the coin-cell battery away from the computer.

Installing the coin-cell battery

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the coin-cell battery and provides a visual representation of the installation procedure.

1

- 1. Insert the coin cell battery with the "+" sign facing up and slide it under the securing tabs at the positive side of the connector.
- 2. Press the battery into the connector until it locks into place.

Next steps

1. Install the powered GPU.

(i) NOTE: This step is required only if the system is configured with powered GPU.

- 2. Close the PSU cage
- 3. Install the side cover.
- 4. Follow the procedure in after working inside your computer.

Processor fan and heat-sink assembly

Removing the processor fan and heat-sink assembly

Prerequisites

1. Follow the procedure in before working inside your computer.

WARNING: The heat sink may become hot during normal operation. Allow sufficient time for the heat sink to cool before you touch it.

CAUTION: For maximum cooling of the processor, do not touch the heat transfer areas on the heat sink. The oils in your skin can reduce the heat transfer capability of the thermal grease.

- 2. Remove the side cover.
- **3.** Open the PSU cage.

About this task

The following images indicate the location of the processor fan and heat-sink and provide a visual representation of the removal procedure.

- 1. Disconnect the processor fan cable from the connector on the system board.
- 2. Loosen the four captive screws that secure the processor fan and heat-sink assembly to the system board.
- 3. Lift the processor fan and heat-sink assembly off the system board.

Installing the processor fan and heat-sink assembly

Prerequisites

NOTE: If either the processor or the heat sink is replaced, use the thermal grease that is provided in the kit to ensure that thermal conductivity is achieved.

About this task

The following image indicates the location of the processor fan and heat-sink assembly and provides a visual representation of the installation procedure.

Steps

- 1. Align the screw holes on the processor fan and heat-sink assembly with the screw holes on the system board.
- 2. Tighten the four captive screws that secure the processor fan and heat-sink assembly to the system board.
- 3. Connect the processor-fan cable to the connector on the system board.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- 3. Follow the procedure in after working inside your computer.

Processor

Removing the processor

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- 3. Open the PSU cage.
- 4. Remove the processor fan and heat-sink assembly.

il NOTE: The processor might still be hot after the computer is shut down. Allow the processor to cool down before removing it.

About this task

The following images indicate the location of the processor and provide a visual representation of the removal procedure.

Steps

- 1. Press down and push the release lever away from the processor to release it from the securing tab.
- 2. Lift the lever upward to lift the processor cover.

CAUTION: When removing the processor, do not touch any of the pins inside the socket or allow any objects to fall on the pins in the socket.

3. Gently lift the processor from the processor socket.

Installing the processor

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the processor and provides a visual representation of the installation procedure.

Steps

- 1. Ensure that the release lever on the processor socket is fully extended in the open position.
- 2. Align the notches on the processor with the tabs on the processor socket and place the processor in the processor socket.
 - () NOTE: The pin 1 corner of the processor has a triangle that aligns with the triangle on the pin 1 corner on the processor socket. When the processor is properly seated, all four corners are aligned at the same height. If one or more corners of the processor are higher than the others, the processor is not seated properly.
- **3.** When the processor is fully seated in the socket, pivot the release-lever down and place it under the tab on the processor cover.

Next steps

- 1. Install the processor fan and heat-sink assembly.
- 2. Close the PSU cage
- **3.** Install the side cover.
- 4. Follow the procedure in after working inside your computer.

Power button

Removing the power button

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- 3. Open the PSU cage.
- 4. Remove the front bezel.

About this task

The following images indicate the location of the power button and provide a visual representation of the removal procedure.

Steps

- 1. Disconnect the power-button cable from the connector on the system board.
- 2. Press the release tabs on the power-button head and slide the power-button cable out from the front-side chassis of the computer.
- 3. Pull the power-button cable out from the computer.

Installing the power button

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following images indicate the location of the power button switch and provide a visual representation of the installation procedure.

Steps

- 1. Insert the power-button cable into the slot from the front-side of the computer, and press the power-button head until it clicks into the place in the chassis.
- 2. Align and connect the power-button cable to the connector on the system board.

Next steps

- 1. Install the front bezel.
- 2. Close the PSU cage
- 3. Install the side cover.
- 4. Follow the procedure in after working inside your computer.

Intrusion switch

Removing the intrusion switch

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- **3.** Open the PSU cage.

About this task

The following image indicates the location of the intrusion switch and provides a visual representation of the removal procedure.

Steps

- 1. Disconnect the intruder cable from the connector on the system board.
- 2. Slide and remove the intrusion switch from the chassis.

Installing the intrusion switch

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the intrusion switch and provides a visual representation of the installation procedure.

- 1. Insert the intrusion switch into its slot and slide the switch to secure it into the slot.
- 2. Connect the intruder cable to the connector on the system board.

Next steps

- 1. Close the PSU cage
- 2. Install the side cover.
- **3.** Follow the procedure in after working inside your computer.

Front I/O panel

Removing the IO panel

Prerequisites

- 1. Follow the procedure in before working inside your computer.
- 2. Remove the side cover.
- **3.** Open the front bezel.
- 4. Open the PSU cage.

About this task

The following image indicates the location of the intrusion switch and provides a visual representation of the removal procedure.

- 1. Disconnect the IO audio, SD card, USB Type-C and IO USB cables from the connector on the system board.
- 2. Slide and remove the IO panel from the chassis.

Installing the IO panel

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the intrusion switch and provides a visual representation of the installation procedure.

- 1. Insert the IO panel into its slot and slide the to secure it into the slot.
- 2. Replace the single (#6-32) screw that secures the IO panel to the computer chassis.
- **3.** Connect the IO audio, SD card, USB Type-C and IO USB cables to the connector on the system board.

Next steps

- **1.** Close the PSU cage.
- 2. Install the front bezel.
- **3.** Install the side cover.
- 4. Follow the procedure in after working inside your computer.

Removing the system board

Prerequisites

- 1. Follow the procedure in before working inside your computer.
 - **NOTE:** Your computer's Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.
 - **NOTE:** Replacing the system board removes any changes that you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.
 - **NOTE:** Before disconnecting the cables from the system board, note the location of the connectors so that you can reconnect the cables correctly after you replace the system board.
- 2. Remove the side cover.
- **3.** Remove the front bezel.
- 4. Open the PSU cage.
- 5. Remove the memory module.
- 6. Remove the WLAN.
- 7. Remove the /M.2 2280 SSD.
- 8. Remove the coin-cell battery.
- **9.** Remove the graphics card.
- 10. Remove the processor fan and heat-sink assembly.
- **11.** Remove the processor.

About this task

The following images indicate the location of the system board and provide a visual representation of the removal procedure.

- 1. Disconnect all the cables that are connected to the system board.
- 2. Remove the eight (#6-32) screws that secure the system board to the chassis.
- 3. Lift the system board at an angle and remove the system board off the chassis.

Installing the system board

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following images indicate the location of the system board and provide a visual representation of the installation procedure.

- 1. Slide the rear I/O-ports on the system board into the rear I/O-slots on the chassis
- 2. Align the screw holes on the system board with the screw holes on the chassis.
- **3.** Replace the eight screws (#6-32) that secure the system board to the chassis.
- 4. Route and connect all the cables to the connectors on the system board.

Next steps

- 1. Install the processor.
- 2. Install the processor fan and heat-sink assembly.
- **3.** Install the coin-cell battery.
- **4.** Install the graphics card.
- 5. Install the /M.2 2280 SSD.
- 6. Install the WLAN.
- 7. Install the memory module.
- 8. Close the PSU cage
- 9. Install the front bezel.
- **10.** Install the side cover.
- **11.** Follow the procedure in after working inside your computer.
 - **NOTE:** Your computer's Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.

NOTE: Replacing the system board removes any changes that you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

Drivers and downloads

Drivers and downloads

When troubleshooting, downloading or installing drivers it is recommended that you read the Dell Knowledge Based article, Drivers and Downloads FAQ SLN128938.

System setup

Boot Sequence

Boot Sequence allows you to bypass the System Setup–defined boot device order and boot directly to a specific device (for example: optical drive or hard drive). During the Power-on Self Test (POST), when the Dell logo appears, you can:

- Access System Setup by pressing F2 key
- Bring up the one-time boot menu by pressing F12 key

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

- Removable Drive (if available)
- STXXXX Drive (if available)

(i) NOTE: XXX denotes the SATA drive number.

- Optical Drive (if available)
- SATA Hard Drive (if available)
- Diagnostics

The boot sequence screen also displays the option to access the System Setup screen.

System setup options

NOTE: Depending on your computer and its installed devices, the items that are listed in this section may or may not appear.

Flashing the BIOS

About this task

You may need to flash (update) the BIOS when an update is available or when you replace the system board. Follow these steps to flash the BIOS:

Steps

- 1. Turn on your computer.
- 2. Go to www.dell.com/support.
- 3. Click Product support, enter the Service Tag of your computer, and then click Submit.

(i) NOTE: If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

- 4. Click Drivers & downloads > Find it myself.
- 5. Select the operating system installed on your computer.
- 6. Scroll down the page and expand BIOS.
- 7. Click **Download** to download the latest version of the BIOS for your computer.
- 8. After the download is complete, navigate to the folder where you saved the BIOS update file.
- 9. Double-click the BIOS update file icon and follow the instructions on the screen.

Updating the BIOS in Windows

Prerequisites

It is recommended to update your BIOS (System Setup) when you replace the system board or if an update is available. For laptops, ensure that your computer battery is fully charged and connected to a power before initiating a BIOS update.

About this task

(i) NOTE: If BitLocker is enabled, it must be suspended prior to updating the system BIOS, and then re enabled after the BIOS update is completed.

Steps

- 1. Restart the computer.
- 2. Go to Dell.com/support.
 - Enter the Service Tag or Express Service Code and click Submit.
 - Click Detect Product and follow the instructions on screen.
- 3. If you are unable to detect or find the Service Tag, click Choose from all products.
- 4. Choose the Products category from the list.

(i) NOTE: Choose the appropriate category to reach the product page.

- 5. Select your computer model and the Product Support page of your computer appears.
- 6. Click **Get drivers** and click **Drivers and Downloads**. The Drivers and Downloads section opens.
- 7. Click Find it myself.
- 8. Click **BIOS** to view the BIOS versions.
- 9. Identify the latest BIOS file and click **Download**.
- Select your preferred download method in the Please select your download method below window, click Download File. The File Download window appears.
- 11. Click Save to save the file on your computer.
- Click Run to install the updated BIOS settings on your computer.
 Follow the instructions on the screen.

Updating BIOS on systems with BitLocker enabled

CAUTION: If BitLocker is not suspended before updating the BIOS, the next time you reboot the system it will not recognize the BitLocker key. You will then be prompted to enter the recovery key to progress and the system will ask for this on each reboot. If the recovery key is not known this can result in data loss or an unnecessary operating system re-install. For more information on this subject, see Knowledge Article: https://www.dell.com/support/article/sln153694

Updating your system BIOS using a USB flash drive

About this task

If the computer cannot load into Windows but there is still a need to update the BIOS, download the BIOS file using another computer and save it to a bootable USB flash drive.

(i) NOTE: You must use a bootable USB flash drive. For more information, see the knowledge base article SLN143196.

Steps

- 1. Download the BIOS update .exe file to another computer.
- 2. Copy the .exe file onto the bootable USB flash drive.
- 3. Insert the USB flash drive into the computer that requires the BIOS update.
- 4. Restart the computer and press F12 when the Dell logo appears to display the One Time Boot Menu.
- 5. Using arrow keys, select USB Storage Device and press Enter.
- 6. The computer restarts to a Diag C:\> prompt.
- 7. Run the file by typing the complete filename and press Enter.
- 8. The BIOS Update Utility is displayed. Follow the on-screen instructions.

System and setup password

Table 19. System and setup password

Password type	Description
System password	Password that you must enter to log on to your system.
Setup password	Password that you must enter to access and make changes to the BIOS settings of your computer.

You can create a system password and a setup password to secure your computer.

 \wedge CAUTION: The password features provide a basic level of security for the data on your computer.

 \triangle CAUTION: Anyone can access the data stored on your computer if it is not locked and left unattended.

(i) NOTE: System and setup password feature is disabled.

Assigning a system setup password

Prerequisites

You can assign a new System or Admin Password only when the status is in Not Set.

About this task

To enter the system setup, press F2 immediately after a power-on or reboot.

Steps

- 1. In the System BIOS or System Setup screen, select Security and press Enter. The Security screen is displayed.
- Select System/Admin Password and create a password in the Enter the new password field. Use the following guidelines to assign the system password:
 - A password can have up to 32 characters.
 - The password can contain the numbers 0 through 9.

- Only lower case letters are valid, upper case letters are not allowed.
- Only the following special characters are allowed: space, ("), (+), (,), (-), (.), (/), (;), ([), (\), (]), (`).
- 3. Type the system password that you entered earlier in the Confirm new password field and click OK.
- **4.** Press **Esc** and a message prompts you to save the changes.
- 5. Press **Y** to save the changes. The computer reboots.

Deleting or changing an existing system setup password

Prerequisites

Ensure that the **Password Status** is Unlocked (in the System Setup) before attempting to delete or change the existing System and Setup password. You cannot delete or change an existing System or Setup password, if the **Password Status** is Locked.

About this task

To enter the System Setup, press ${f F2}$ immediately after a power-on or reboot.

Steps

- 1. In the System BIOS or System Setup screen, select System Security and press Enter. The System Security screen is displayed.
- 2. In the System Security screen, verify that Password Status is Unlocked.
- 3. Select System Password, alter or delete the existing system password and press Enter or Tab.
- 4. Select Setup Password, alter or delete the existing setup password and press Enter or Tab.

() **NOTE:** If you change the System and/or Setup password, re enter the new password when prompted. If you delete the System and Setup password, confirm the deletion when prompted.

- ${\bf 5.}~{\rm Press}~{\bf Esc}$ and a message prompts you to save the changes.
- 6. Press Y to save the changes and exit from System Setup. The computer restarts.

Troubleshooting

Dell SupportAssist Pre-boot System Performance Check diagnostics

About this task

SupportAssist diagnostics (also known as system diagnostics) performs a complete check of your hardware. The Dell SupportAssist Pre-boot System Performance Check diagnostics is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

NOTE: Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

For more information, see Resolve Hardware Issues With Built-in and Online Diagnostics (SupportAssist ePSA, ePSA or PSA Error Codes).

Running the SupportAssist Pre-Boot System Performance Check

Steps

- 1. Turn on your computer.
- 2. As the computer boots, press the F12 key as the Dell logo appears.
- 3. On the boot menu screen, select the **Diagnostics** option.
- Click the arrow at the bottom left corner. Diagnostics front page is displayed.
- Click the arrow in the lower-right corner to go to the page listing. The items detected are listed.
- 6. To run a diagnostic test on a specific device, press Esc and click Yes to stop the diagnostic test.
- 7. Select the device from the left pane and click Run Tests.
- 8. If there are any issues, error codes are displayed. Note the error code and validation number and contact Dell.

Dell Enhanced Pre-Boot System Assessment — ePSA Diagnostic 3.0

You can invoke the ePSA diagnostics by either of the following ways :

- Press the F12 key when the system posts and choose ePSA or Diagnostics option on One Time Boot Menu.
- Press and hold Fn(Function key on keyboard) and **Power On** (PWR) the system.

For more details, see Dell EPSA Diagnostic 3.0.

System diagnostic lights

Power-supply diagnostics light

Indicates the status of the power-supply in either of the two sates:

- Off: No Power
- On: Power is supplied.

Power button light

Table 20. Power button LED status

Power button LED state	System state	Description
Off	• S4	There is in Hibernate or Off state.
	• S5	
Solid White	SO	Working state
Solid Amber		Various sleep states or No POST
Blinking Amber/White		Failure to POST

This platform relies on the Power button LED light blinking in an amber/white pattern to determine a failure as listed in the following table:

(i) NOTE:

The blinking patterns consists of two numbers (representing First Group: Amber blinks, Second Group: White blinks).

- First Group: The Power button LED light blinks Amber, 1 to 9 times followed by a short pause with LED off for a couple of seconds.
- Second Group: The Power button LED light then blinks White, 1 to 9 times, followed by a longer pause before the next cycle starts again after a short interval.

Example: No Memory detected (2,3). Power button LED blinks 2-times in Amber followed by a pause, and then blinks 3-times in White. The Power button LED will pause for few seconds before the next cycle repeats itself again.

Table 21. Diagnostic LED status

Blinking pattern		Problem description	Suggested resolution
Amber	White		
1	2	Unrecoverable SPI flash failure	
2	1	CPU failure	 Run the Intel CPU diagnostics tools. If problem persists, replace the system board.
2	2	System board failure (including BIOS corruption or ROM error)	 Flash latest BIOS version. If problem persists, replace the system board.
2	3	No memory/RAM detected	 Confirm that the memory module is installed properly. If problem persists, replace the memory module.
2	4	Memory/RAM failure	 Reset the memory module. If problem persists, replace the memory module.

Blinking patte	rn	Problem description	Suggested resolution
2	5	Invalid Memory installed	 Reset the memory module. If problem persists, replace the memory module.
2	6	System board error, chipset error, clock failure, gate A20 failure, super I/O failure, keyboard controller failure	 Flash latest BIOS version. If problem persists, replace the system board.
3	1	CMOS battery failure	 Reset the CMOS battery connection. If problem persists, replace the RTS battery.
3	2	PCIe or video card/chip failure	• Replace the system board.
3	3	BIOS recovery image not found	 Flash latest BIOS version. If problem persists, replace the system board.
3	4	BIOS recovery image found but invalid	 Flash latest BIOS version. If problem persists, replace the system board.
3	5	Power Rail Failure	 EC ran into power sequencing failure. If problem persists, replace the system board.
3	6	Paid SPI volume error	 Flash corruption detected by SBIOS. If problem persists, replace the system board.
3	7	Intel ME (Management Engine) error	 Timeout waiting on ME to reply to HECI message. If problem persists, replace the system board.
4	2	CPU power cable connection issue

Diagnostic error messages

Table 22. Diagnostic error messages

Error messages	Description
AUXILIARY DEVICE FAILURE	The touchpad or external mouse may be faulty. For an external mouse, check the cable connection. Enable the Pointing Device option in the System Setup program.
BAD COMMAND OR FILE NAME	Ensure that you have spelled the command correctly, put spaces in the proper place, and used the correct path name.
CACHE DISABLED DUE TO FAILURE	The primary cache internal to the microprocessor has failed. Contact Dell
CD DRIVE CONTROLLER FAILURE	The optical drive does not respond to commands from the computer.

Table 22. Diagnostic error messages (continued)

Error messages	Description
DATA ERROR	The hard drive cannot read the data.
DECREASING AVAILABLE MEMORY	One or more memory modules may be faulty or improperly seated. Reinstall the memory modules or, if necessary, replace them.
DISK C: FAILED INITIALIZATION	The hard drive failed initialization. Run the hard drive tests in Dell Diagnostics .
DRIVE NOT READY	The operation requires a hard drive in the bay before it can continue. Install a hard drive in the hard drive bay.
ERROR READING PCMCIA CARD	The computer cannot identify the ExpressCard. Reinsert the card or try another card.
EXTENDED MEMORY SIZE HAS CHANGED	The amount of memory recorded in non-volatile memory (NVRAM) does not match the memory module installed in the computer. Restart the computer. If the error appears again, Contact Dell
THE FILE BEING COPIED IS TOO LARGE FOR THE DESTINATION DRIVE	The file that you are trying to copy is too large to fit on the disk, or the disk is full. Try copying the file to a different disk or use a larger capacity disk.
A FILENAME CANNOT CONTAIN ANY OF THE FOLLOWING CHARACTERS: \setminus / : * ? " < > -	Do not use these characters in filenames.
GATE A20 FAILURE	A memory module may be loose. Reinstall the memory module or, if necessary, replace it.
GENERAL FAILURE	The operating system is unable to carry out the command. The message is usually followed by specific information. For example, Printer out of paper. Take the appropriate action.
HARD-DISK DRIVE CONFIGURATION ERROR	The computer cannot identify the drive type. Shut down the computer, remove the hard drive, and boot the computer from an optical drive. Then, shut down the computer, reinstall the hard drive, and restart the computer. Run the Hard Disk Drive tests in Dell Diagnostics .
HARD-DISK DRIVE CONTROLLER FAILURE 0	The hard drive does not respond to commands from the computer. Shut down the computer, remove the hard drive, and boot the computer from an optical drive. Then, shut down the computer, reinstall the hard drive, and restart the computer. If the problem persists, try another drive. Run the Hard Disk Drive tests in Dell Diagnostics .
HARD-DISK DRIVE FAILURE	The hard drive does not respond to commands from the computer. Shut down the computer, remove the hard drive, and boot the computer from an optical drive. Then, shut down the computer, reinstall the hard drive, and restart the computer. If the problem persists, try another drive. Run the Hard Disk Drive tests in Dell Diagnostics .
HARD-DISK DRIVE READ FAILURE	The hard drive may be defective. Shut down the computer, remove the hard drive, and boot the computer from an optical. Then, shut down the computer, reinstall the hard drive, and restart the computer. If the problem persists, try another drive. Run the Hard Disk Drive tests in Dell Diagnostics .
INSERT BOOTABLE MEDIA	The operating system is trying to boot to non-bootable media, such as an optical drive. Insert bootable media.

Table 22. Diagnostic error messages (continued)

Error messages	Description
INVALID CONFIGURATION INFORMATION-PLEASE RUN SYSTEM SETUP PROGRAM	The system configuration information does not match the hardware configuration. The message is most likely to occur after a memory module is installed. Correct the appropriate options in the system setup program.
KEYBOARD CLOCK LINE FAILURE	For external keyboards, check the cable connection. Run the Keyboard Controller test in Dell Diagnostics .
KEYBOARD CONTROLLER FAILURE	For external keyboards, check the cable connection. Restart the computer, and avoid touching the keyboard or the mouse during the boot routine. Run the Keyboard Controller test in Dell Diagnostics .
KEYBOARD DATA LINE FAILURE	For external keyboards, check the cable connection. Run the Keyboard Controller test in Dell Diagnostics .
KEYBOARD STUCK KEY FAILURE	For external keyboards or keypads, check the cable connection. Restart the computer, and avoid touching the keyboard or keys during the boot routine. Run the Stuck Key test in Dell Diagnostics .
LICENSED CONTENT IS NOT ACCESSIBLE IN MEDIADIRECT	Dell MediaDirect cannot verify the Digital Rights Management (DRM) restrictions on the file, so the file cannot be played.
MEMORY ADDRESS LINE FAILURE AT ADDRESS, READ VALUE EXPECTING VALUE	A memory module may be faulty or improperly seated. Reinstall the memory module or, if necessary, replace it.
MEMORY ALLOCATION ERROR	The software you are attempting to run is conflicting with the operating system, another program, or a utility. Shut down the computer, wait for 30 seconds, and then restart it. Run the program again. If the error message still appears, see the software documentation.
