# Key features and benefits

Quad 4K input with zero latency pass-through	Achieve zero-latency pass-through for real-time output of audio/video content on up to four 4K displays.
Exceptionally low latency	Maximize your existing infrastructure investment with glass-to-glass latency as low as 50 ms when paired with Maevex 6100 Series decoders.
Streaming flexibility	Enjoy six streaming protocols—HLS, MPEG2-TS, RTP, RTMP, RTSP, and SRT—for secure, trouble-free streaming.
HDCP compliant	Support for both HDCP 1.4 and 2.2.
H.264	Standards-based codec that delivers flawless quality at much lower bandwidth with exceptionally low latency.
Flawless image quality	Benefit from up to 4:4:4 sub-sampling support as well as user definable bitrates and quantization parameters to best balance the bitrate and compression demands of different content.
Quiet and rack mountable	Support up to eight 4K streams and recordings from a single U of rack space. Whisper-quiet operation makes Maevex ideal for environments that require a noise level of 25 dB and less.
Complimentary Maevex SDKs and APIs	Build new applications or integrate the functionalities of PowerStream Plus into existing applications.

Low latency. High quality. Massive scalability.

A high-performance H.264 encoder, Maevex 6152 integrates seamlessly into existing infrastructures and interoperates with virtually any network device, ensuring high-density content distribution and system scalability—all without sacrificing image quality. Maevex uses existing 1 Gigabit Ethernet infrastructure to allow many streams of any quality to be transmitted on a single cable, eliminating the need for a dedicated distribution network.

Quad stream and record. Anywhere, at the same time.

Reach your audience anywhere, anytime. The Maevex 6152 encoder delivers source content to on-premises end points (over LAN, WAN, or internet), feeds cloud-based servers, and records to local or network storage for later editing and viewing. It can also transmit live and/or recorded content for multiple video-on-demand platforms. Support for the Secure Reliable Transport (SRT) protocol ensures that reliable, high-quality streaming is also possible on noisy or unpredictable networks.
