The Cable for Crisp VGA Displays

Revive your VGA displays and projectors for computing and gaming activity. ALOGIC's DisplayPort to VGA Adapter with Audio makes it possible to connect modern DisplayPort-equipped laptops, desktops, gaming consoles and streaming devices to earlier-model VGA displays, giving them a new lease on life.

User-Friendly Adapters

Whether you're looking to install one of our adapters in your home, or to fit out a workplace, rest assured that ALOGIC's Elements range is engineered for maximum user-friendliness. Elements' 30AWG cables feature compact connectors and maximum bend ability. Their anatomy, which also features easy-grip PVC jacketing, makes them considerably easier to guide into ports in tight spaces, such as behind displays, and in equipment racks. The Elements adapter also features a latch, so once you plug it in, it stays in.

Your Adapter When Reliability is Essential

Connector construction undermines the longevity of many DisplayPort adapters. That's why our engineers and designers have developed a unique ABS connector shell that holds up in high-traffic installation environments.

The Elements range is developed out of ALOGIC's experience producing hundreds of thousands of cables and adapters to stand the test of time in the most demanding professional and household environments.

Whether at home or in the office, be assured that these cables won't let you down. We vouch for this with a lifetime warranty.

User Interface

Input	DisplayPort Video (Male)
Output	VGA Video Output (Female)

Resolution Support

Supports up to 1920x1200 at 60Hz including Full HD 1920x1080

Package Includes

DisplayPort to VGA Adapter

Compatibility

Use for connecting DisplayPort source devices to VGA displays.

This adapter is uni-directional; it cannot be used to connect a VGA source to a DisplayPort display.

Data Rate

4.95Gbps

Warranty

Lifetime
