The Philips ProCare hairdryer is designed with advanced Philips EHD (Even Heat Distribution) Technology™. The dryer uses a uniquely designed air outlet (using an EHD fan-shaped grille, see below figure) to ensure that heat is always distributed very evenly, even at high temperatures, and prevents damaging hot spots. This gives advanced protection to the hair from overheating and thus helps to keep your hair healthy and shiny.

3 Dry your hair

- 1 Connect the plug to a power supply socket.
 - For precise drying, attach the concentrator ((2)) onto the hairdryer. The concentrator enables you to direct the airflow straight at the brush or comb with which you are styling your hair.
 - To enhance volume for curls and bouncy style, attach the diffuser ((1)) onto the hairdryer. The volume diffuser has been specially developed to gently dry both straight and curly or wavy hair. To add volume at the roots, insert the pins into your hair in such a way that they touch your scalp. Make rotating movements with the appliance to distribute the warm air evenly through your hair.
 - To disconnect the attachment, pull it off the hairdryer.
- 2 Adjust the airflow switch ((4)) and temperature switch ((5)) to suitable positions.

Switch	Settings	Function
Temperature	⚡ Quick dry	Dry shower-wet hair quickly.
	☺ Thermoprotect	Provides the optimal drying temperature and gives additional protection from overheating the hair.
Airflow	⌋	Gently dry the hair.
	II	Strong airflow and fast drying.
	I	Gentle airflow and styling.
	O	Switch off.

- 3 Press the cool shot button ((3)) for cool airflow to fix your style.
- 4 The appliance is equipped with ion function, which provides additional shine and reduces frizz.
 - ↳ When the function is on, a special odor may be smelt. It is normal and caused by the ions which are generated.
 - To turn the ion function on or off, slide the IONIC switch ((6)) to I or O.

After use:

- 1 Switch off the appliance and unplug it.
- 2 Place it on a heat-resistant surface until it cools down.
- 3 Remove the concentrator or diffuser before you clean the appliance.
- 4 Clean the appliance by damp cloth.
- 5 Keep it in a safe and dry place, free of dust.
